

VALIARCH ADVISORY

Capability Note – Operating Discipline for Complex Enterprises

Founder Perspective

Valiarch Advisory is led by Chirayu Vaidya, a senior operations leader with experience driving large-scale service delivery, vendor ecosystems, GCC environments, and AI-enabled operating transformations.

Having operated inside high-accountability enterprise environments, we understand what breaks during scale: governance gaps, vendor transition risk, AI deployment without oversight, GCCs without mandate clarity, and metrics without accountability. Valiarch was built to solve these structural failures.

Core Capabilities

- Vendor Transitions & Operating Stabilization: Transition control tower architecture, knowledge migration frameworks, SLA risk containment strategy, 30-60-90 stabilization blueprints, executive dashboards.
- GCC Build & Scale Operating Models: Mandate clarity, org design, cost-to-value operating models, governance cadence, performance scorecards, scale roadmap.
- AI-Led Operations & Governance: Human-in-the-Loop frameworks, AI risk & explainability governance, agent performance measurement, compliance layers, AI-Ops telemetry dashboards.
- Board-Ready Cadence & Accountability: KPI architecture, executive scorecards, portfolio risk heatmaps, ownership models, structured governance forums.

Delivery Model

Valiarch operates through structured phases: Diagnostic (2–4 weeks), Operating Blueprint Design, Embedded Advisory or Control Office, 90Day Impact Milestones, and Executive & Board Reporting Support.

Engagement formats include Strategic Advisory Retainers, Transition

Mandates, GCC Setup Programs, AI Governance Audits, and Operational Reset Engagements.

Ideal Clients

- Enterprises undergoing vendor change
- Organizations building or restructuring a GCC
- Boards deploying AI into production environments
- Founder-led companies scaling beyond informal management
- High-growth firms requiring operating discipline

Operating Philosophy

Scale exposes structural weaknesses. Governance prevents collapse.
Judgment sustains growth. Valiarch Advisory builds operating systems that withstand complexity.
